

Data Use & Client Confidentiality Standard (extract)

Purpose limitation, cross-client confidentiality and aggregation thresholds for client-facing analytics

Document ID	DUS-07
Version / Status	2.1 / Approved
Document owner	Rachel Goldberg, Chief Privacy Officer
Approver(s)	Data Governance Council (2026-01-08)
Effective / Last reviewed	Effective 2026-01-15
Classification	INTERNAL - CONFIDENTIAL
Standard contact	Ethan Brooks, Data Governance Lead, Commercial Bank
Related documents	POL-FCC-014; MRM-POL-02; TDIP-CAT-2026.2

1. Purpose

This Standard governs how client data may be used, combined and disclosed, particularly in analytics shown to clients. It applies to consumer and commercial clients. Consumer data is additionally subject to the Gramm-Leach-Bliley Act privacy provisions; commercial client data is protected by contractual confidentiality (Treasury Management Services Agreement, s14).

2. Classification (summary)

Class	Examples
Public	Published rates, cutoff times
Internal	Aggregated operational metrics not attributable to a client
Confidential - Client	A client's own transactions, wire history, beneficiaries
Restricted - Client Confidential	Account-level activity in deposit systems; financial-crimes features; data about one client's accounts used for risk purposes

3. Purpose limitation

Data collected or derived for one purpose (for example fraud detection, AML monitoring, or credit) must not be used for another purpose, including product features, without Privacy Office approval and, for financial-crimes data, FCC approval. Feature tables inherit the permitted purpose of their most restrictive input.

4. Cross-client confidentiality

Information about one client, including the behavior of a client's account as a counterparty (for example activity in a counterparty's account after it receives funds), must not be used to generate content shown to another client. This applies even if the information is presented as a pattern, a typical value or an insight, and even if the counterparty is not named.

5. Aggregated cohort statistics shown to clients

Statistics derived from multiple clients may be displayed only when all of the following hold for the measurement window:

1. the cohort contains at least **500 transactions**;
2. the cohort contains at least **20 distinct originating clients**;
3. no single client contributes more than **15%** of cohort volume;
4. statistics are refreshed at least monthly; and
5. wording and disclaimer are approved by the Disclosure Review Committee.

Cohorts failing any condition must be suppressed (not rounded or approximated).

6. Use of a client's own data

A client's own historical transactions may be used to generate insights shown to that client (for example the typical time for that client's past wires to a given beneficiary to complete). Insights must be based on at least **5 comparable transactions** and must state the basis (count and period).

7. Approvals

Activity	Approval
Access to Restricted datasets	Data owner + Privacy Office (Collibra DAR; 15 business days)
New client-facing use of client data	Privacy Impact Assessment (~4 weeks)
Use of financial-crimes data outside FCC purposes	Privacy Office + FCC; generally not approved
