

Payments Architecture Review Board - ADR Register & Decision Minutes (extract)

Architecture decisions binding on channel, payments and data teams; minutes of 2026-09-08

Document ID	ARB-PAY-REG-2026Q3
Version / Status	2026-Q3 / Published
Document owner	Jenna Ross, ARB Secretariat
Approver(s)	Nikhil Bose, Chief Architect - Payments & Treasury (ARB Chair)
Effective / Last reviewed	Published 2026-09-12
Classification	INTERNAL - CONFIDENTIAL
Related documents	PIR-2024-07; PPH-API-CAT-2026.3; TDIP-CAT-2026.2

1. ADR register (Payments)

ADR	Title	Date	Status	Applies to
ADR-PAY-017	Kafka (Confluent) is the integration backbone for payment lifecycle events	2023-11-07	Accepted	All payment systems
ADR-PAY-019	Channel status integrations must be event-driven; no polling of PPH	2024-06-11	Accepted	All channels
ADR-PAY-021	Hold reason details never leave the financial-crimes trust boundary	2025-04-08	Accepted	PPH v2, channels, data
ADR-PAY-023	UETR is the canonical end-to-end correlation id for all outbound wires	2025-09-09	Accepted	PPH, gateways, channels, TDIP
ADR-PAY-026	Client-facing analytical outputs are served via the TDIP Insights API	2026-05-12	Accepted	Channels, TDIP

ADR-PAY-019 - Event-driven channel status

Context: INC-2024-1182 showed that channel polling of PPH v1 can degrade wire release at peak. **Decision:** Channels obtain payment status by consuming lifecycle events into a channel-owned read model (pattern: CBO Status Projection Service). Synchronous status calls are limited to user-initiated refresh with throttling. **Consequences:** new status features must budget for topic onboarding, a projection/mapping module and replay handling.

ADR-PAY-021 - Hold reason confidentiality

Decision: Hold reason codes, descriptions, scores and analyst notes remain within FCT systems. PPH v2 and events expose only hold presence and holdId. Any client-facing hold explanation must be obtained from an FCT-owned, FCC-approved facade that returns disclosure tier and approved copy, not raw reasons. **Note:** legacy v1 holdReasonDesc retained until v1 sunset.

ADR-PAY-023 - UETR as correlation id

Decision: PPH assigns a UETR to every outbound wire at release (including Fedwire pacs.008). Consumers needing to correlate with gpi data must store UETR from v2 APIs or lifecycle events. v1 consumers do not receive UETR.

ADR-PAY-026 - Insights served via TDIP

Decision: Predictions, typical-time statistics and other analytical outputs shown to clients are computed in TDIP and served via versioned Insights API endpoints; channel BFFs must not compute analytics. Each insight requires MRM classification (model or EUA) before production.

2. Minutes - ARB session 2026-09-08 (extract)

Item	Discussion / decision	Owner
PPH v1 sunset	Volaris 9.6 removes the v1 adapter. Decision: no extension beyond 2027-03-31 . Remaining consumers must present migration plans at the 2026-11-10 ARB.	Kevin O'Brien

Item	Discussion / decision	Owner
gpi real-time service	GTRS (GTSI-0107) not funded for 2026. Board noted client demand; recommended GTSI engage channel teams early. Interim exposure of GPI_TRACKER_SNAPSHOT directly to channels is not approved ; a read-only service with quota isolation would require ARB review.	Elena Vasquez
Status projection reuse	Board reaffirmed SPS as the reference pattern for client-facing status of any payment type.	Arjun Mehta
Structured address enforcement	PPH and gateways on track for November 2026; expect increase in repair holds.	Raymond Ortiz

Next sessions: 2026-11-10 and 2026-12-08. Submissions due 10 business days prior via the ARB intake form.
