

Enterprise Notification Service - Integration Guide & Treasury Event Catalog

How producers register events and templates; current Treasury (TRS) event catalog; subscription model

Document ID	ENS-INT-3.2
Version / Status	3.2 / Published
Document owner	Melissa Grant, EM - Enterprise Notification Service
Approver(s)	Sanjay Iyer (Director, Enterprise Notification Platform)
Effective / Last reviewed	Published 2026-07-30
Classification	INTERNAL - CONFIDENTIAL
Related documents	CBO-ARCH-WC-4.1; POL-FCC-014; ENS-1120

1. Overview

ENS delivers transactional notifications across email, SMS, mobile push (CBO Mobile) and the CBO in-app inbox. Producers send a registered **event type**; ENS resolves recipients from **subscriptions**, renders an approved **template** and delivers per user channel preferences.

Capability	Value
Throughput	300 msgs/s sustained, 1,200 msgs/s burst (Treasury domain quota: 120 msgs/s)
Delivery latency (p95, push/in-app)	4 s
SMS	Requires TCPA consent flag from CBO user profile; 160-char templates
Masking	Account numbers masked to last 4; no Restricted data in payloads or templates

2. Onboarding a new event type

1. Submit ServiceNow catalog item 'ENS Event Onboarding' (owner: Paul Henderson).
2. Define payload schema and recipient resolution (subscription filters).
3. Draft templates per channel; submit to the Disclosure Review Committee (DRC) - bi-weekly.
4. ENS configuration and test (~12 ENS engineering hours per event type).
5. Producer integration testing in UAT; production enablement.

SLA: 6 weeks from complete submission to production, including DRC review. Requests submitted after 2026-11-20 are scheduled after the year-end change freeze.

3. Subscription model

Subscriptions are created per user for an **event type** with optional filters on **accountId** and amount thresholds. ENS does not support subscriptions to an individual entity (for example a specific paymentId); entity-level subscriptions are planned under **ENS-1120 (2027-H1)**. Producers may send directly to a named user for transactional events where the producer itself maintains the recipient list (pattern 'producer-resolved recipients').

4. Treasury (TRS) event catalog - wire and ACH

Event type	Producer	Trigger	Template (subject line)	Status
TRS.WIRE.APPROVAL_REQUIRED	CBO	Wire awaiting approver	TPL-WIRE-APR-01 'Wire awaiting your approval'	Live
TRS.WIRE.RELEASED	CBO	PPH v1 status -> PROCESSED	TPL-WIRE-REL-02 'Wire completed: {amount} to {beneficiary}'	Live
TRS.WIRE.REJECTED	CBO	PPH v1 status -> REJECTED	TPL-WIRE-REJ-01 'Wire rejected'	Live
TRS.WIRE.INCOMING_POSTED	CDP	Incoming wire posted to DDA	TPL-WIRE-IN-03 'Incoming wire received'	Live

Event type	Producer	Trigger	Template (subject line)	Status
TRS.ACH.STATUS_CHANGED	CBO SPS	ACH lifecycle milestone	TPL-ACH-STS-01	Live (2025-11)
TRS.ACH.RETURN_RECEIVED	CBO SPS	ACH return	TPL-ACH-RET-01	Live (2025-11)

No event types are registered for wire network acceptance, beneficiary credit (gpi ACCC), wire returns, gpi milestones or client action required on held wires.

5. APIs

ID	Endpoint	Purpose
EP-ENS-01	POST /ens/v3/notifications	Send event (registered type, approved template)
EP-ENS-02	POST /ens/v3/subscriptions	Create subscription (eventType + accountId filter)
EP-ENS-03	GET /ens/v3/event-types?domain=TRS	Catalog

6. Content rules

- Templates for financial-crimes related states must use FCC-approved copy (see POL-FCC-014 Appendix B).
- Status wording in templates must follow the producer's approved status terminology.
- No links that expose transaction data outside authenticated sessions.
