

PRISM Payments Hub - API & Event Catalog (v1 / v2) incl. v1 Deprecation Notice

Consumer reference for REST APIs and Kafka topics exposed by PPH

Document ID	PPH-API-CAT-2026.3
Version / Status	2026.3 / Published
Document owner	Sunita Rao, Principal Engineer - PPH APIs
Approver(s)	Kevin O'Brien (EM); Raymond Ortiz (Director)
Effective / Last reviewed	Published 2026-09-10
Classification	INTERNAL - CONFIDENTIAL
Related documents	PPH-SYS-OVW-9.2; ADR-PAY-019; ADR-PAY-021; ADR-PAY-023; PPH-2190; PPH-2207

1. Deprecation notice - PPH v1 APIs

v1 sunset: 2027-03-31 (no extensions)

The v1 adapter is not supported on Volaris 9.6 (upgrade April 2027). ARB confirmed on 2026-09-08 that no extensions will be granted. All consumers must migrate to v2 and, for status use cases, to the pay.wire.lifecycle.v2 topic.

v1 consumer	Owner	Migration status (PPH-2190)	Notes
IVR wire status	Contact Center Tech	Migrated (2026-05)	-
Service Center CRM	CRM Engineering	In progress (target 2026-12)	-
cbo-wire-bff (Wire Center)	CBO Wire Center squad	Not started	Tracked as CBO-4471 (unscheduled)
Wire Room console	Payment Operations Tech	Migrated to IWB (2025)	-

2. v1 APIs (deprecated)

ID	Method / path	Purpose	Limits
EP-PPH-01	GET /pph/v1/wires/{wireRef}/status	Coarse status for one wire	20 TPS shared across all v1 consumers
EP-PPH-02	GET /pph/v1/wires?clientId&fromDate&toDate	List wires	Max 500 rows; no cursor
EP-PPH-03	POST /pph/v1/wires	Submit approved wire	-

EP-PPH-01 response (excerpt)

```
{
  "wireRef": "PPH26092400481233",
  "status": "HELD", // RECEIVED | PENDING | HELD | PROCESSED | REJECTED | CANCELLED | RETURNED
  "statusTs": "2026-09-24T14:12:09-04:00",
  "holdFlag": true,
  "holdReasonDesc": "<string, max 255>",
  "fedRef": "20260924QMGFT015000123" // IMAD; null for Swift wires
}
```

Field	Description
status	PROCESSED covers RELEASED, SENT_TO_NETWORK, NETWORK_ACCEPTED and COMPLETED (see PPH-SYS-OVW-9.2 s3).
holdReasonDesc	Free-text hold description synchronized from HMS (legacy, since 2019). Content is not curated for external display. Not present in v2 (ADR-PAY-021).
fedRef	IMAD only. OMAD and UETR are not available in v1.

3. v2 APIs (GA 2025-10)

ID	Method / path	Purpose	Limits / notes
EP-PPH-04	GET /pph/v2/payments/{paymentId}	Payment detail incl. lifecycleState, identifiers, network, hold, charges	150 TPS
EP-PPH-05	GET /pph/v2/payments?clientId&rail&state&from&to&cursor	Search	Filters by clientId (not account); no beneficiary-name filter (PPH-2251)
EP-PPH-06	GET /pph/v2/payments/{paymentId}/history	State history	Timestamps = PPH processing time
EP-PPH-07	POST /pph/v2/payments	Submit payment	Idempotency-Key header required

EP-PPH-04 response (excerpt)

```
{
  "paymentId": "PPH26092400481233",
  "rail": "FEDWIRE", // FEDWIRE | SWIFT | BOOK
  "lifecycleState": "NETWORK_ACCEPTED",
  "identifiers": { "cboRef": "CBW-20260924-004812", "imad": "...", "omad": "...",
    "uetr": "8f0c1b52-4d1e-4b0a-9e43-2b6c1f4f7a10", "endToEndId": "INV-77812" },
  "network": { "sentTs": "...", "gateway": "FFC" },
  "hold": { "isHeld": false, "holdId": null },
  "charges": { "chargeBearer": "SHAR", "orderingBankFee": { "amount": 30.00, "ccy": "USD" } },
  "return": { "isoReason": null, "returnedTs": null }
}
```

v2 does not include a settlement object. Rail-specific settlement status and the authoritative Federal Reserve acceptance timestamp are proposed in PPH-2207 (backlog, 8 pts, awaiting a product sponsor). Intermediary or beneficiary bank charges are not known to PPH.

4. Kafka topics

ID	Topic	Content	Retention	Classification / onboarding
EV-PPH-01	pay.wire.lifecycle.v2	WireLifecycleEvent v2.3 (Avro): paymentId, rail, fromState, toState, eventTs, identifiers, return.isoReason	7 days	Confidential - Client. Consumer ACL via PPH Jira; ~3 weeks incl. schema registry access
EV-PPH-02	pay.ach.lifecycle.v1	ACH lifecycle events	7 days	Consumed by CBO SPS (ACH Tracker)

Hold reasons are not published on PPH topics. Return reasons (ISO pacs.004 codes, e.g., AC04, AC01, RR05) are published on pay.wire.lifecycle.v2 since 2026-08 (PPH-2266).

5. Service levels

Interface	Availability	Latency (p95)	Support
v1 REST	99.9%	350 ms	Best effort until sunset
v2 REST	99.95%	180 ms	T1
pay.wire.lifecycle.v2	99.95%	event lag < 2 s	T1

6. Open backlog relevant to consumers

Key	Summary	Status
PPH-2207	v2 settlement object (fedSettlementTs from pacs.002/OMAD; settlementStatus by rail)	Backlog - no sponsor
PPH-2251	v2 search: index beneficiary name	Backlog
PPH-2190	v1 sunset - consumer migration tracking	In progress

Contacts: Sunita Rao (API design), Kevin O'Brien (scheduling via Payments Platform Demand Board), Laura Kim (product).
