

Treasury Data & Insights Platform - Data Catalog Extract (Payments Domain) & Insights API

Datasets, feature tables, classifications, ownership, freshness and the Insights serving pattern

Document ID	TDIP-CAT-2026.2
Version / Status	2026.2 / Published
Document owner	Carlos Mendes (EM, Treasury Data Platform); Dr. Aisha Rahman (Lead Data Scientist)
Approver(s)	Wei Zhang (Director, Treasury Data & Analytics); Ethan Brooks (Data Governance)
Effective / Last reviewed	Published 2026-09-18
Classification	INTERNAL - CONFIDENTIAL
Related documents	DUS-07; MRM-POL-02; ADR-PAY-026; PNG-TDD-6.0

1. Platform overview

TDIP runs on Snowflake (Enterprise, US-East) with dbt transformations, a Feast feature store, Amazon SageMaker for model training and batch scoring, and the **Insights API** serving layer (precomputed results in a low-latency store). Access to datasets is governed in Collibra; Restricted datasets require Privacy Office approval (SLA 15 business days).

2. Payments domain datasets

Dataset	Source	Refresh	History	Classification	Data owner / steward
pay_wire_txn_hist	PPH (CDC)	Hourly	7 yrs	Confidential - Client	Laura Kim / Carlos Mendes
gpi_tracker_events	GPI_TRACKER_SNAPSHOT (GPI-C)	Nightly 05:00 ET (hourly from 2026-11, TDA-2188)	Since 2025-03-01	Confidential - Client	Laura Kim / Carlos Mendes
fed_ack_events	net.fedwire.ack.v1	NOT INGESTED (TDA-2210)	-	-	-
dda_txn_history	Core Deposit Platform	Daily	7 yrs	Restricted - Client Confidential	Mark Sullivan / Deposits Data Eng.
client_hierarchy	CIF + CES	Daily	Current + 2 yrs	Confidential - Client	Marcus Chen / Carlos Mendes
cbo_wire_events	CBO clickstream	Hourly	13 months	Internal	Marcus Chen

Notes: pay_wire_txn_hist.uetr is populated for Swift wires since 2018 and for Fedwire wires since 2025-10 (ADR-PAY-023). Settlement-time analytics for domestic wires require fed_ack_events (TDA-2210, backlog).

3. Feature tables

Feature table	Grain	Derived from	Classification / permitted purpose	MRM link
wire_corridor_stats_daily (TDA-2140)	currency x destination country x day	pay_wire_txn_hist + gpi_tracker_events, all originating clients	Internal - built for Payment Ops dashboards. Contains wire counts, distinct_originating_clients, same_day_accc_rate, median_hours_to_accc. No suppression flag.	None (descriptive)
beneficiary_behavior_profile	on-us beneficiary account x day	dda_txn_history + pay_wire_txn_hist (incoming wires to CNB accounts)	Restricted - Client Confidential. Permitted purpose: FCT fraud / mule-detection features only. Includes bene_median_hours_to_outflow, bene_outflow_ratio_24h, bene_new_counterparties_30d.	Input to M-FCT-0034
client_wire_history_features	originating client x beneficiary key	pay_wire_txn_hist + gpi_tracker_events	Confidential - Client. Prototype (not productionized): count, median release-to-ACCC, p90, last_seen.	Not registered

3.1 Corridor statistics sample (rolling 90 days to 2026-08-31, outbound Swift)

Currency / country	Wires	Distinct originating clients	Largest client share	Same-day ACCC	Median hours to ACCC
EUR / DE	31,200	1,140	4%	92%	2.1

Currency / country	Wires	Distinct originating clients	Largest client share	Same-day ACCC	Median hours to ACCC
GBP / GB	18,450	860	6%	94%	1.6
CAD / CA	12,900	1,020	5%	90%	2.4
MXN / MX	2,950	88	21%	81%	4.9
INR / IN	1,730	64	9%	76%	6.2
NGN / NG	140	11	38%	52%	19.5

4. Insights API

Client-facing analytical outputs are served by the Insights API (ADR-PAY-026). Results are computed in TDIP (batch or micro-batch), published to the serving store and exposed through versioned endpoints with entitlement checks delegated to the calling channel.

ID	Endpoint	Status	Notes
EP-TDIP-01	GET /tdip/insights/v1/cash-forecast/{clientId}	GA (2025-09)	Model M-TRS-0142; p95 120 ms; reference implementation
-	Wire history / corridor insights	Not available	No endpoints exist for wire insights; client_wire_history_features is a prototype

Onboarding a new insight: (1) MRM inventory registration per MRM-POL-02, (2) data access approvals per DUS-07, (3) serving endpoint build (~13-21 pts typical), (4) DRC approval of client-facing wording and disclaimers.

5. Known gaps

- Fed acceptance timestamps not ingested (TDA-2210).
- gpi data is nightly until TDA-2188 completes (target 2026-11); history begins 2025-03-01.
- No real-time (sub-minute) serving for wire data; minimum freshness is hourly.
