Wire Tracking Center - Feature Concept

PM-WTC-MR-0.3 v0.3 · Sarah Whitfield, Senior Product Manager - Wire Tracking · Crestline National Bank · Wire Tracking Center for CBO Wire Center

Feature concept

ID	Capability	Concept detail
FC-01	FedEx-style domestic timeline	Wire Submitted -> Wire Approved -> Bank Received -> Confirmation Number Generated -> Settled. 'Settled' can be shown when the CBO status shows 'Completed' (already available today).
FC-02	International live route (Swift gpi)	Live map of intermediaries refreshed every minute; 'Expected delivery: Today' on every gpi wire; intermediary and beneficiary fees; 'Delivered' when funds reach the beneficiary bank.
FC-03	Held wire review & self-service	Show the exact review reason from the risk system (e.g. 'Potential duplicate', 'Unusual activity detected', 'Sanctions screening in progress'). Confirm / Reject buttons on all held wires. 'Risk & Release insights: this wire will be released about 30 minutes after you confirm.'
FC-04	Wire Insights	'Beneficiary typically moves funds within 4 hours.' '92% of similar [currency] wires complete the same day.' 'Predicted delivery time' for this wire based on the client's similar past wires.
FC-05	Notifications	'Notify me when this wire settles' per wire; category alerts (released, settled, returned, international milestones).
FC-06	Share status with recipient	One-click live tracking link for the beneficiary including full wire details, fees and funding account.
FC-07	Returned wires	Return reason, root-cause insight and one-click resend.

Assumptions (PM view)

- Status data comes from the Payments Hub status API that Wire Center already uses.
- gpi data: Payment Networks Engineering (Raj Malhotra) - see spike CBO-4480.
- Insights can be calculated in the CBO wire BFF from wire history.
- Notifications use existing ENS wire events.
- Mostly front-end work for the CBO Wire Center squad; estimate 1.5 PIs.

Timeline

Pilot with 30 clients in February 2027; general availability in Q1 2027 with FC-01 to FC-07.
