Wire Tracking Center - Demo Questions

Q1 · Dependencies and owners
I've uploaded my market research and concept. Before I write the BRD: which existing systems does the Wire Tracking Center depend on, and who owns each today?

Q2 · 'Settled' for domestic wires
My timeline ends in 'Settled'. Wire Center already shows 'Completed' - can we just use that?

Q3 · Live international route
For international wires I want the live SWIFT gpi route, refreshed every minute, with 'Expected delivery: Today'. Feasible for Q1 2027?

Q4 · Held-wire design
Review FC-03. Clients want to know why a wire is held and to fix it themselves. Any issues?

Q5 · In-flight conflicts
Before I go further - is anything already in the Wire Center backlog or in production that conflicts with policy or with this feature?

Q6 · Insights and predictions
FC-04: can we show 'Beneficiary typically moves funds within 4 hours', '92% of similar EUR wires complete same day', and a predicted delivery time based on the client's similar past wires?

Q7 · Missing endpoints
List every endpoint, field or event we need that doesn't exist yet, the owning team, and any existing ticket.

Q8 · Per-wire notifications
Can a client subscribe to a single wire - 'notify me when it settles'?

Q9 · Prior attempts and reuse
Has anyone attempted wire tracking before? What should we avoid, and what can we reuse?

Q10 · Effort and critical path
Draft the dependency, effort and engagement section of the BRD: which teams to talk to, how many hours to allocate, approvals, lead times and the critical path.
